FLUOROCYCLE CASE STUDY SA POWER NETWORKS

FluoroCycle

SA Power Networks, formerly ETSA Utilities, is South Australia's electricity distributor, delivering power to more than 820,000 customers across the State. It is responsible for managing and maintaining a distribution network of about 87,000km, transporting electricity from the high voltage transmission network to connection points in homes and business.

As one of the State's largest organisations, SA Power Networks employs around 1,800 people located throughout metropolitan and regional South Australia. It is also a significant corporate citizen, supporting a range of charities and arts, sporting and environmental organisations.

SA Power Networks is also the main provider of public lighting services in South Australia, with responsibility for more than 200,000 public streetlights, and has been recycling these for more than fifteen years. This has resulted in around 150 tonnes of waste being diverted from landfill into resource recovery, including approximately 25 tonnes of mercury bearing waste which has been processed by CMA EcoCycle for recovery and recycling.

In recognition of these efforts and its ongoing commitment to resource recovery and responsible waste management, SA Power Networks recently became the first electricity distributor in Australia to become a Signatory in the Federal Government's FluoroCycle Scheme.
